

# LEAN TECH

## Mid to Senior QA Automation

### The ideal candidate must have the following:

We are looking for a QA Automation Engineer with experience in Python to help us verify the quality of the many services, applications, and APIs that we are currently working.

- Implement test automation for services and cloud applications to validate requirements.
- Assist with manual testing of client applications when needs arise (10% of time).
- Participate as part of an agile team in the definition, estimation, and validation of user stories schedule on the sprint.
- Collaborate and communicate with developers to ensure the quick resolution of issues found.
- Collaborate with Product Management and Tech Support to define requirements and reproduce issues.

### Soft skills:

Great creativity and motivation to find software bugs before they make it into production. Willingness to learn new tools and processes, as well as recommend new tools and processes to help with automation testing.

### Desired English Level:

- B2 or Higher.

### Good to have:

Deep understanding of software requirements and edge cases. Understanding of load testing and performance is a plus. Understanding of databases is a plus.
